No. 2 - February 2011

Pegasus Thruster Dive Teams Take to the Road for February Trade Shows Across the Country

Pegasus is taking the show on the road! To further national distribution and to continue to introduce our unique hands free Diver Propulsion Vehicles (DPVs) to divers around the world, Pegasus will be making a splash at all three of this month's diving trade shows. Our first stop will be the Miami International Boat show on February 17th, where we're excited to be taking part in the first ever Dive & Travel section of the exhibition. At the same time, we'll be in Chicago, IL at the 41st Annual "Our World Underwater" show at the Donald Stevens convention center. From there, we head to the Big Easy for "Underwater Intervention" from Feb 22-24. Wherever you are, we hope you can stop by our booths to check out the latest from Pegasus Thruster. Come feel the *thrust* for yourself and watch for us in the pools!

Pegasus lends a hand by dedicating Thrusters for use in community projects

Pegasus Thruster, Inc. is dedicated to protecting our waters, contributing to education and furthering research. In January, two Thrusters were loaned to Biological Solutions, Inc., which was charged with the task of surveying the state of protected sea grass in the Ft. Lauderdale Las Olas canals. The Thrusters allowed the group to survey twice the water in half the time! As part of the *Pegasus in the Community* program, we loan Thrusters to reputable charitable organizations, which allows them to more effectively complete their marine projects.

Need thrust?

If you're in need of the use of a Pegasus Thruster to conduct your philanthropic project, please visit the "contact us" section of the website

Thruster demo on West Coast

President Dean Vitale has been busy spreading the word! Last month Dean hit the West Coast to demo thrusters to the S. California Dive Club of the Inland Empire. No further explanation was needed when the

Thrusters were used to tow two groups of four divers back to the entry point. Others who tested out the units include Andres Martinez, a Santa Barbara Commercial sea urchin diver was amazed at the ease of use and how much additional area he was able to cover. "I didn't even notice the drag of my 500-foot hose," said Martinez. "Robert Jacoway, of the Ocean Research Group, checked out the Thrusters to see how it will help them continue to teach diving skills and accomplish their mission of preserving marine life."

Stay charged! Dive often!
