REEF AND RAINFOREST

A unique portrayal of natural history subjects in one of the world's most biodiverse regions. Reef and Rainforest is a photographic portrayal of marine and terrestrial life in one of the world's most biodiverse regions – the tropics of north-eastern Australia, together with the South Pacific nations of Solomon

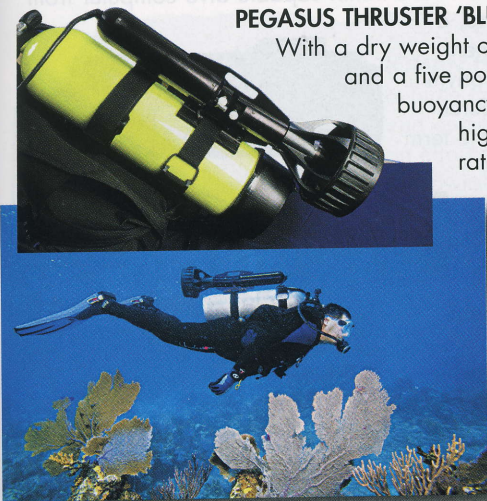

Islands and Papua New Guinea. The photographs were taken over a period of more than 30 years while the author was living in the Solomon Islands and northern Australia. From detailed macro studies to sweeping scenics and aerials, the photographs are impressive for both their technical/compositional expertise and the unique insight they provide into the behavioural nuances of marine and terrestrial wildlife. Along with the

stunning photography, the detailed and reflective captions are drawn from the author's experiences. Reef and Rainforest conveys the richness and diversity of the natural world with maximum visual impact.

ABOUT THE AUTHOR Michael McCoy lived in the Solomon Islands for 26 years, where he worked as a professional photographer and writer. He has travelled and photographed extensively in Papua New Guinea. He has authored several books and has worked on contract photo/writing assignments for Australian Geographic and photo assignments for National Geographic, and as a consultant for several television documentary productions including the BBC Natural History Unit's South Pacific.

PEGASUS THRUSTER 'BLU' RECREATIONAL DPV

With a dry weight of less than 12 pounds and a five pound negative buoyancy, this unit has the highest thrust to weight ratio in its class. The

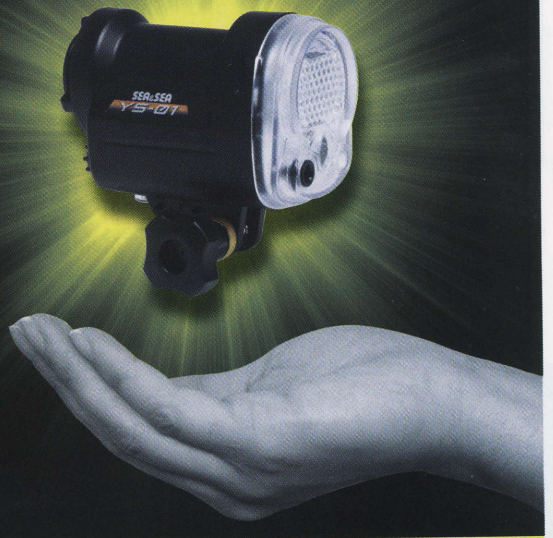

Pegasus provides a comfortable and easy option for underwater maneuvering. Backed by an unprecedented one-year unconditional warranty, the Pegasus means only one thing – rugged simplicity. The

Pegasus underwater propulsion system is designed specifically by scuba divers for scuba divers. By simply moving your head and body, the Pegasus maneuvers like 'wings in the water'.
